Tuesday, February 02, 2013 The Pacific Northwest has been experiencing some widespread rain events this week, and numerous storms have dumped rain on the Smithsonian Volcano Discovery Center, which is located in the Tumalo Nature Park in Bend, Oregon. The weather station at the center, which is located by the Tumalo River, is located at 5,700 feet above sea level, so when the base of the mountains are covered with snow, the ground can act as a huge microwave reflector, amplifying the effect of cold conditions caused by a negative phase of the Westerlies. This makes the station at the volcano even cooler and wetter than the surrounding mountain slope. Before I go on to show you some pictures, I want to make something clear. Even though the volcano-related weather is below sea level, as opposed to the higher altitude where it is colder and wetter, the weather here is not tropical. The temperature never gets warm enough for the ground to stay wet and there is no rain. Rather, the wetness is caused by cold surface water that has been held in the soil for a sufficiently long time to freeze, resulting in "permafrost ground." The ground often starts to thaw during the rainy season, but it never truly freezes again, so the ground remains wet. In the following photos, you can see the river overflowing its banks in the center of the river bend. The Tumalo River is a small river that originates on the southeast slope of Mount
